Abstract :

DE4218158 A

The conventional monochrome or colour printing is superseded by prodn. of a positive colour photograph in one or more photosensitive layers on either side of the card.

Photographic paper may be glued permanently or removably to the card, or a peelable photograph may be sepd. from a paper backing for such bonding. The thickness of the paper or peelable attachment is such that the thickness of the card with the photograph attached remains within tolerance.

USE/ADVANTAGE - Esp. for operation of public telephone appts., an image with higher quality can be produced at less cost without complicated printing processes. (Dwg.0/0)
